Professional Summary

Cloud and DevOps Engineer with 2.7 years of experience designing, deploying, and operating cloud-native, containerized systems on AWS. Strong expertise in CI/CD automation, Infrastructure as Code, Kubernetes orchestration, and production observability. Experienced supporting Java, Python, and PHP-based microservices ecosystems, enabling reliable REST service deployments and distributed application operations.

Skills

- **Cloud Platforms:** AWS (EC2, S3, IAM, VPC, ECS, ECR, RDS, CloudFront, Beanstalk) – experience with VPC networking, subnets, security groups, load balancing fundamentals · Azure DevOps (Boards, Repos, Pipelines)
- **Containers & Orchestration:** Docker · Kubernetes
- **Infrastructure as Code & Automation:** Terraform · Ansible
- **CI/CD:** Jenkins · GitHub Actions · Git
- **Programming & Scripting:** Java · Python · Bash · PHP
- **Monitoring & Logging:** Prometheus · Grafana · AWS CloudWatch
- **Operating Systems:** Linux (Ubuntu) · Shell scripting
- **Backend Technologies:** Maven · Symfony · MVC Architecture · MySQL · REST APIs

Experience

Software Engineer

Happiest Minds Technologies — Aug 2023 – Present

◊ **PepsiCo Project** (Aug 2023 – Apr 2025)

- Built and maintained **CI/CD** pipelines using **Jenkins** and **GitHub Actions**, supporting Maven-based build artifact integration, environment configuration injection, and automated container deployments, reducing manual release effort by 60%.
- Containerized applications using **Docker** and deployed services on **AWS ECS** with **ECR**. Resolved build failures, dependency conflicts, container startup issues, reducing image size and build time by 30–40%.
- Supported **Kubernetes** deployments including rollout validation, configuration consistency, and **rolling/blue-green release support** to ensure safe production rollouts and rollback readiness.
- Worked with backend teams supporting deployment and runtime stability of **Java, Python, and PHP microservices**, resolving environment misconfigurations, service connectivity issues, and runtime failures.
- Improved operational visibility using **AWS CloudWatch** logs, metrics, and alarms, supporting post-release monitoring, incident debugging, and faster root cause analysis; recognized as “**Learning Champion**”.

◊ **NBB Project** (May 2025 – Present)

- Supported deployment and lifecycle management of **GenAI-powered API services** built on Pimcore, ensuring stable cloud environment configuration and service availability.
- Enhanced CI/CD and monitoring workflows for **AI-driven APIs**, **troubleshooting** build failures, API latency issues, integration timeouts, and container configuration problems.
- Supported **production monitoring** and incident debugging for distributed API services interacting with AI model providers, ensuring stable service availability and performance tracking.

Education

• **Bachelor of Technology** – Computer Science Engineering

Nov 2020 – Jul 2023

University Institute of Technology, Shimla (HPU) | 9.05 CGPA
